Enteric release profile, excellent
bioavailability, a ready-to-use film
coating compound.

Product Information

AquaPolish® E

BIOGRUND's one-step film coating system **AquaPolish® E** provides a protective film with excellent enteric properties. And with its superior light, oxygen and moisture protection, it is recommended for tablets, pellets, capsules and granules.

AquaPolish® E is a combination of acrylic acid copolymer, coloring additives and additional excipients. It is a homogeneous, dry-milled, powdered compound, developed for the coating of all kinds of solid dosage forms.

The partially neutralized film-forming polymer makes the coating process cost effective because of the high amount of polymer in the ready-to-use compound. It is easily soluble in water, and a reproducible high-quality film coating is guaranteed. Clear, white and colored preparations can be tailor-made according to customer requirements.

AquaPolish® E can be applied by using conventional or modern coating equipment.

Regulatory and quality aspects: All **AquaPolish® E** formulations are developed to meet the official regulatory requirements of the user's country for pharmaceutical products.

Product Performance

General Information on BIOGRUND

Since 1999, **BIOGRUND** has been the specialist for the homogeneous mixing of excipients and carriers. With locations in Germany, Switzerland, America and Russia, we support the food supplement and pharmaceutical industry in the development, formulation and production of solid oral dosage forms. The tailor-made and ready-to-use special powder mixtures for film coating, sugar-coating, coloring and tableting enable optimum results in a short time. Easy, fast and reliable!
